Learning. Technology. Solutions.

The aim of this course is to make you aware of the main safety issues concerning asbestos and working with asbestos-containing materials.

You'll explore the hazards associated with working with and removing asbestos-containing materials. You will also find out why it is vital to be aware of the regulations and procedures regarding asbestos.

Learning Objectives

- Identify what asbestos is
- Recognise types and properties of asbestos
- Identify the dangers of asbestos
- Explain why asbestos regulations and guidance are in place
- Identify the responsibilities of employers
- Identify where asbestos can be found in the oil and gas industry
- Identify those at risk of exposure
- Identify the steps you must take if asbestos is encountered
- Identify the risks from asbestos
- Identify who should be responsible for carrying out asbestos-related work
- Identify the Personal Protective Equipment that must be worn when handling or disturbing asbestos-containing materials
- Explain the process that must be followed when removing and handling products containing asbestos
- Identify the steps that must be taken to safely dispose of asbestos waste
